|------|--|------------|
| | b. Permanent space presently occupied | |
| | Less Space to be retained in downtown area | |
| | Total | |
| 25X1 | 3. The Commissioner, Public Buildings Service, considers that contractor construction for long-term lease is impractical under present policies and laws. He also advises that no new government space is being planned in the foreseeable future in which the Agency can be allocated space. To lease additional commercial space to satisfy our requirement for sq. ft. of new space would cost, at the prevailing rate of per year. Since most of the permanent space now occupied in downtown Washington is also leased, the total | 25X |
| | annual rental paid by the government for our space would be well over 4. Construction of a building or buildings providing net usable space of 9q. ft. would necessitate construction of a gross space area of approximately | 25X 25X |
| 25X1 | sq. ft. Gross area requirements for custodial space, cafeteria, boiler room, snack bars, etc., are estimated to run on the order of brings the total gross requirement to an estimated sq. ft. | 25X 25X |
| 25X1 | 5. This figure of gross sq. ft. is necessarily a very rough estimate. To arrive at a more exact estimate, we should undertake the development of preliminary plans which would include a survey of all elements of headquarters, estimates of their future requirements, determination of the optimum use of the present headquarters building, final determination of space requirements in the central | |
| | city area, and selection of the appropriate site or sites at Langley. From these pre- liminary plans, gross square footages for the necessary supporting areas and pre- liminary cost estimates for construction can be developed. We estimate that this preliminary planning can be accomplished for | 25X |
| | D. COST ESTIMATES | |
| | 1. An accurate estimate of construction costs at the Langley site cannot be developed for the estimated gross requirement of sq. ft. until the completion of a preliminary planning phase. We are thinking of a building or buildings that would bland with the present headquarters building, and, as such, the cost | 25X |
